CEI Evaluation	03/31/2022	Activity Location:	NJ	By:	STATE	Identifier:	001	Person:	COMLE	Suborganization:	Found Violation:	NO
NOC Date:		Citizen Complaint:	NO	Multimedia Inspection:	YES	Sampling:	NO	Not Subtitle C:	NO	Day Zero:	03/31/2022	Focus Area:
Eval. Notes:	A Small Quantity Generator (SQG) standard compliance inspection was conducted for the facility above. The previous RCRA inspection was conducted on with no violations cited. Contract Filling Inc. owns and operates a contract packaging facility which batch filling and packaging of various consumer products, including colognes, perfumes, after shave creams, and other personal care products is conducted. They used to have a nail polish packaging line, which no longer exists. Contract Filling is considered a major DPCC facility due to the exceedance of threshold flammable products (alcohols) stored on site in storage tanks. Hazardous waste is generated from the ethanol (ethyl alcohol) used to clean the filling lines. All waste ethanol solution is recycled onsite in a 55-gallon capacity distillation unit. The clean recycled ethanol is reused onsite for CFI's cleaning purposes. The still bottoms generated by the distillation unit are removed periodically and placed into a 55-gallon D001 HW satellite accumulation container (SAC). When full, the SAC is moved to the 180-day Central Accumulation Area (CAA). Satellite accumulation containers (SACs) of waste ethanol are located in the Red Room (called Red for internal purposes because of the bulk flammable perfumes/cologne products), QC lab, and the blending room. Once the SACs become full, they are moved to the 180-day CAA for disposal. If CFI deems the waste ethanol no longer able to be distilled, it is then moved to the CAA storage area for disposal. At the time of this inspection, there were no waste ethanol alcohol waiting to be distilled. Veolia Environmental picks up waste ethanol (that can no longer be distilled) and profiles it as (D001) waste flammable before disposal. Broken or unused bottles of customers products are returned to the customers and not kept on site. Universal Waste (bulbs, batteries and consumer electronics) is sent out for recycling. Some Used oil is generated fro

Eval. Notes:	Contract Filling Inc. owns and operates a contract packaging facility which batch filling and packaging of various consumer products, including colognes, perfumes, after shave creams, and other personal care products. Contract Filling is a small quantity generator (SQG) of hazardous waste from the cleanup of the fill lines. Approximate 150 employees work one shift five days a week in a 150,000-square foot one-story building with a mezzanine for office/administration space. Contract Filling is considered a major DPCC facility due to the exceedance of threshold flammable products (alcohols) stored on site in storage tanks. In previous inspection, Contract Filling used isopropyl alcohol (IPA) for the cleaning of the fill lines and mixing vessels. Currently, ethanol (ethyl alcohol) D001 is used for cleaning for the entire operation and now generates waste ethanol as part of their waste stream. The distillation unit remains in full operation for recovery of product, as noted in the previous RCRA inspection report. No longer is a nail polish packaging operation performed, so F003 waste streams is no longer a generated. There are Satellite Accumulation Areas (SAA) in the Red Room, QC Lab, and Blending Room. All the 55-gallon drums were properly labeled and closed at the time of inspection. Once the SA containers are full, they are moved to the 180-day HW storage area until ultimate disposal. Broken or unused bottles are returned to their customers. Compliance documents such as hazardous waste manifests, Emergency Action Plan dated August 2017, RTK filing in February 2017, and the DPCC Plan & Alcohol Products & Storage Tank Plan, # 070400185000 was reviewed. Cardboard is recycled. Wood pallets are sent back to the manufacturer. The daily inspection logs and weekly inspection logs were reviewed. Contract Filling received a NJDEP Stewardship certificate in 2012. Universal Wastes include lamps, batteries and consumer electronics. At this time, no

CEI Evaluation	01/09/2015	Activity Location:	NJ	By:	STATE	Identifier:	001	Person:	NOSDS	Suborganization:		Found Violation:	NO
NOC Date:		Citizen Complaint:	NO	Multimedia Inspection:	NO	Sampling:	NO	Not Subtitle C:	NO	Day Zero:	01/09/2015	Focus Area:	
Eval. Notes:	On 1/9/15, the Department conducted a routine RCRA inspection at Contract Filling Inc. (CFI) (NJ0000247437), located in Cliffside Park, NJ. The facility representatives were Mr. Joseph Lizzi, Owner, Mr. Jeff Bognatz, Director of Engineering, and Mr. Mohammed Jamhour, QA Director. CFI was last inspected on 9/26/11, by Mrs. Maria Erickson (NJDEP). CFI was assessed as a small quantity generator (SQG) of hazardous waste. CFI operates a contract packaging facility, which conducts batching, filling, and packaging of various products, including colognes, perfumes, after shaves, deodorant sticks, etc... Most products arrive onsite at the facility, ready to be packaged. A quick QC is performed on all products, in an onsite QC lab, before being packaged. Most companies send their products to CFI in 250-gallon totes, or in 55-gallon drums, along with the labels, boxes, caps, and bottles they would like to have the product placed in. CFI then assembles the order, packages, and ships the product to the required destination. CFI will also manufactures (batch mixes) various formulations for their customers as well. The customers send CFI the various ingredients, and "recipe", and the products are manufactured onsite, and then packaged like other products onsite. CFI's primary hazardous waste stream is a waste Isopropyl Alcohol (IPA) (D001) solution. This solution is generated from the cleaning of fill lines, and/or mixing vessels. All waste IPA solution is recycled onsite, through a 55-gallon capacity distillation unit onsite (Little Still LS-55IID, mfg. by the Finish Company Inc., in Erie, PA). The clean IPA removed by the distillation unit, is reused onsite for CFI's cleaning purposes. The still bottoms generated by the distillation unit are removed periodically, and placed into a 55-gallon hazardous waste satellite accumulation container (SAC). When full, the SAC is placed into a nearby 180-day hazardous waste container storage area (HWSA). Since the last RCRA inspectio
